

Stop 5G!

5G is a massive and dangerous experiment on public and environmental health.

FACT #1

5G combines microwave and millimeter wave wireless radiation. There is no scientific evidence to support any claim of 5G safety.

FACT #2

5G requires significantly more cell towers which will increase *involuntary exposure* to wireless radiation in our communities.

FACT #3

Hundreds of scientists and public health experts from around the world are demanding a moratorium on the deployment of 5G.

FACT #4

The 30 million dollar, ten year US National Toxicology Program study found clear evidence of cancer from exposure to wireless radiation.

FACT #5

Thousands of independent studies show adverse health impacts from wireless radiation. Children are more vulnerable, *and they depend on us to protect them*. Studies also show wireless radiation harms birds, bees, trees and nature.

FACT #6

People are already getting injured by cell towers, smart phones, wi-fi, smart meters and other wireless devices.

FACT #7

The government's human exposure guidelines haven't been updated in more than twenty years—*and are only concerned with thermal exposures*.

FACT #8

5G signals don't travel far, so unless people oppose 5G, antennas will be installed every couple hundred feet apart— next to homes, apartments, parks, and schools.

FACT #9

Telecom companies like AT&T, Sprint, T-Mobile and Verizon are rushing to install 4G LTE “small cell” antennas —the foundation for 5G— as quickly as possible.

FACT #10

When people oppose “small cell” 4G and 5G, antennas may be denied, and leaders may create ordinances to better protect the public and the environment.
